1. Executive Summary

WeddingPass is a WhatsApp-native platform that replaces the chaos of wedding guest management with a seamless digital experience. Organizers build their guest list, send personalized invitations via WhatsApp, manage RSVPs in real time, collect digital cash gifts, and control gate entry on the wedding night — all without guests needing to download any app.

Target market	Avg. guest list	Gift potential	Setup time
GCC Weddings	150–300	KD 3,000+	< 30 min
Kuwait · Saudi · UAE	guests per wedding	per event collected	for organizer

2. The Problem

Wedding guest management in the Gulf region is still handled manually — WhatsApp group messages, paper lists, and word of mouth. This creates serious pain points for everyone involved:

For the organizer

No central guest list. RSVPs tracked in messy spreadsheets or group chats. No way to know who actually attended. Gift amounts recorded on scraps of paper.

For the families

Bride's and groom's families maintain separate lists with no coordination. Seat assignments get confused. Uninvited walk-ins cause embarrassment at the door.

For guests

Invitations get lost in WhatsApp groups. No clear confirmation. No easy way to send a cash gift in advance. Waiting in lines at the gate.

For the couple

No live visibility on who is attending. Gifts counted only after the event. No record of who gave what. Thank-you messages sent manually days later.

3. Our Solution

WeddingPass replaces every manual step with a WhatsApp-powered digital flow. The organizer sets up the event once. Everything else is automated.

1

Create the event

Set event name, date, venue, capacity, and family sides. Takes under 5 minutes.

2

Build the guest list

Upload a CSV, paste phone numbers, or add guests manually. Assign each guest a table, side (bride/groom), and access tier.

3

Send personalized invitations

The system sends a beautiful WhatsApp message to each guest with their name, table, and a unique link to their invitation page.

4

Guests RSVP via WhatsApp bot

One tap to confirm or decline. The bot handles plus-one requests, sends reminders to non-responders, and issues access passes instantly on confirmation.

5

Digital gift flow

After confirming, guests are offered the option to send a digital cash gift — any amount, any local payment method, with a personal message.

6

Gate entry on the night

Staff use a tablet app to scan QR codes or search by name. The system confirms, marks the guest as entered, and prevents duplicate entry.

7

Live couple dashboard

The couple watches gifts arrive in real time, sees who has entered the venue, and gets a full report at the end of the night.

8

Post-wedding thank-you

The system automatically sends a personalized WhatsApp thank-you from the couple to every guest who attended or sent a gift.

4. Key Features

Personalized WhatsApp messages

Invitations

Every guest receives a message addressed to them by name, showing their table number and family side. A rich link preview shows the couple's names and venue before they even tap.

Real-time confirmation tracking

RSVP management

The organizer sees confirmed, pending, and declined counts update live. Auto-reminders are sent to non-responders at configurable intervals.

Cash gifts via WhatsApp

Digital gifts

Preset amounts in local currency (KD, SAR, AED). Guests add a personal message. Payment via KNET, card, or bank transfer. Gifts arrive as animated envelopes on the couple's screen.

QR scan or name search

Gate entry

Works on any tablet or smartphone. Staff see the guest's name, photo, table, and tier on screen. One-tap entry marking prevents duplicate access.

Separate views per family

Two-family dashboard

Bride's family manages their own list; groom's family manages theirs. The couple sees everything combined. No family can see the other's gift amounts.

Trust-tree invitations

Social chain invites

Each confirmed guest can invite one more person from their contacts, up to a configurable depth. Every pass shows the full invitation chain for accountability.

Venue display screen

Live gift wall

A beautiful display shown at the venue. Each gift appears as an animated envelope with the guest's name. Creates a celebratory shared moment.

Full record for the couple

Post-event report

Complete guest list with RSVP and attendance status. Full gift ledger with amounts, messages, and sender names. Exportable as PDF or spreadsheet.

5. Guest Experience — WhatsApp Flow

The guest never downloads an app. Every interaction happens inside WhatsApp — the app already on every phone in the Gulf region.

1 Message received

Guest receives a personalized WhatsApp message: their name, the couple's names, date, venue, and a unique link to their invitation page.

2 Invitation page opens

Tapping the link opens a beautiful mobile page: Bismillah, couple names, full event details, their personal table number, and two large buttons — Attending / Can't make it.

3 Confirm attendance

Tapping Attending sends confirmation to the system instantly. The bot replies within seconds.

4 Plus-one question

The bot asks if they're bringing a guest. The organizer controls whether this is allowed per guest.

5 Gift offer

The bot presents gift options with preset amounts in local currency. The guest chooses an amount, pays via their preferred method, and adds a personal message.

6 Pass delivered

The bot sends the entry QR code with the guest's name, table number, and family side. This is their entry pass — screenshot or show on screen at the gate.

7 Reminder (if no reply)

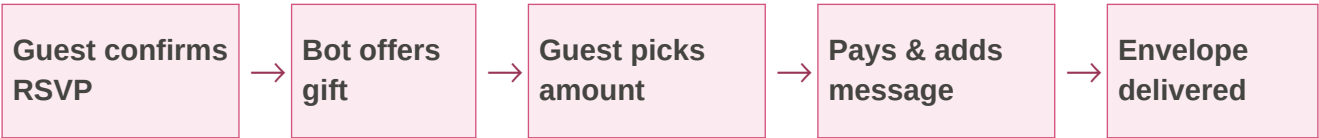

Non-responders receive automatic reminders at 7 days, 3 days, and 1 day before the event. The organizer can pause or customize reminders.

8 Post-event thank-you

After the wedding, a personalized thank-you message is sent from the couple to every guest who attended or sent a gift.

6. Digital Gift System

Cash gifts are the dominant gift format for weddings in the Gulf. WeddingPass digitizes this tradition — making it easier for guests to give and giving the couple full visibility.

Payment methods supported

Kuwait	Saudi Arabia	UAE	International
KNET Credit/debit card Bank transfer	STC Pay Mada Bank transfer	Apple Pay Credit card Bank transfer	Visa / Mastercard Wire transfer

Gift experience highlights

- Preset amounts in local currency — organizer sets options (e.g. KD 20 / 50 / 100 / 200 / Custom)
- Personal message added by guest — stored alongside the gift in the couple's dashboard
- Animated digital envelope — delivered to the couple's screen and displayed on the venue gift wall
- Real-time running total — couple sees the total grow throughout the evening
- By-family breakdown — private split showing bride's side vs groom's side contributions
- Full gift ledger — exportable PDF with every gift, amount, message, and sender name
- Post-event payout — collected funds transferred to the couple's nominated bank account
- Cash gift logging — staff at the gate can log physical cash gifts into the same system

7. Two-Family Dashboard

Gulf weddings involve two separate families, each managing their own guest list. WeddingPass gives each family their own private view, while the couple sees everything combined.

Bride's family	Groom's family	The couple	Gate staff
Sees only their guests and gift amounts. Can add / remove guests. Can send reminders. Cannot see groom's data.	Sees only their guests and gift amounts. Can add / remove guests. Can send reminders. Cannot see bride's data.	Sees everything combined. Full gift total + breakdown. Both RSVP progress bars. Combined guest feed. Export full report.	Scans QR codes. Searches by name. Marks guests as entered. Flags uninvited visitors. No gift data visible.

Privacy rules

Bride's family cannot see groom's gift total	Prevents awkward comparisons between families
Groom's family cannot see bride's guest list	Each family manages their own relationships
Gate staff see entry data only	No financial information shown to venue staff
Couple's combined view is private	Only the couple can see the full merged dashboard
WhatsApp login — no password	Each family member authenticates via a secure link sent to their phone
Automatic role assignment	System shows the right view based on the phone number registered

8. Gate Entry System

The gate app runs on any smartphone or tablet — no special hardware needed. Staff scan QR codes or search by name to verify entry in under 3 seconds.

1 Guest arrives at gate

Presents their WhatsApp pass (QR code or pass message) on their phone screen.

2 Staff scans or searches

Camera scan takes under 1 second. Name search works as a backup for elderly guests without QR.

3 Guest card appears

Staff sees: full name, photo (if available), table number, family side, tier (General/VIP), plus-one count.

4 One-tap entry confirmation

Staff taps 'Enter' — the system marks the guest as entered and prevents the same QR being used again.

5 Uninvited visitor

If not on the list, the gate app shows a red alert. Staff can request organizer approval for same-minute additions.

6 Capacity lock

When venue capacity is reached, the gate app automatically alerts staff to pause entry until the organizer adjusts.

7 Offline mode

The gate app caches the full guest list locally. If internet drops, scanning continues. Data syncs when connection resumes.

Hardware required	Any smartphone or tablet (iOS or Android)
Scan speed	Under 1 second per guest
Offline support	Full guest list cached — works without internet
Elderly mode	Name-only search — no QR scan needed
Duplicate prevention	Each QR is single-use — second scan is rejected
VIP highlighting	VIP guests shown with distinct color on gate screen
Plus-one handling	Pass shows +1 allowed — staff admit both together
Real-time sync	Entry count updates on couple dashboard instantly

9. Social Chain Invitation

An optional feature that turns each confirmed guest into a trusted recruiter. Instead of the organizer inviting everyone, each guest gets the power to invite one more person — creating a chain of accountability where everyone is vouched for by someone already on the list.

Level	Who	Can invite	Gate pass shows
0	Organizer	Direct invites (unlimited)	Organizer
1	Level 0 invitees	1 person each	Invited by organizer
2	Level 1 invitees	1 person each	Sara → invited by organizer
3 (limit)	Level 2 invitees	No further invites	Ahmed → Sara → organizer

Why this works for weddings

- Guests feel responsible for who they bring — vibe and trust are preserved
- Organizer can cut any branch instantly, removing that guest and everyone they invited
- Gate pass shows the full chain — accountability without awkwardness
- Depth limit (2–4 levels) configurable by the organizer per event
- Perfect for private receptions, rooftop parties, or VIP-only sections within a larger wedding

10. Couple Dashboard

The couple's private dashboard combines everything — guests, gifts, family sides, and live entry — in one screen. It is the most emotionally important screen in the product.

RSVP overview	Live counts — invited, confirmed, pending, declined — with separate progress bars for bride's side and groom's side.
Gift total	The combined gift total in large numbers, broken down by family side. Updates in real time as gifts arrive.
Live gift feed	Every new gift appears with the guest's name, message, amount, and a colored pill showing which family side they belong to.
Guest list with filters	Full list filterable by status (confirmed / pending / declined / entered). Each row shows name, table, side, and current status.
Entry counter	Live count of guests who have entered the venue. Updates in real time from the gate app.
Quick actions	Send thank-you messages · Export full report · Launch gift wall · Open gate app

11. User Roles & Permissions

Permission	Organizer	Bride family	Groom family	Gate staff
Create event	Yes	No	No	No
Add / remove guests	Yes	Own side	Own side	No
Send invitations	Yes	Yes	Yes	No
View RSVP status	All	Own side	Own side	No
View gift amounts	All	Own side	Own side	No
View combined gift total	Yes	No	No	No
Scan at gate	Yes	No	No	Yes
Add walk-in guest	Yes	No	No	Notify only
Export report	Yes	Own data	Own data	No
Send thank-yous	Yes	No	No	No

12. Technical Architecture

WeddingPass is built as a cloud-native web application. No guest app download required. The organizer dashboard and gate app are progressive web apps accessible from any browser.

Guest layer

WhatsApp Business API delivers all messages. Invitation pages are mobile-optimized web pages with no login required. QR codes work offline.

WhatsApp bot

Handles RSVP confirmations, plus-one requests, gift offers, payment links, pass delivery, reminders, and post-event thank-yous. Powered by WhatsApp Business API with custom conversation flows.

Payment gateway

Integrates with regional payment providers: KNET (Kuwait), Mada (Saudi), Apple Pay, and international card networks via Stripe or MyFatoorah.

Backend API

RESTful API managing guest data, RSVP state, gift transactions, chain invitations, and real-time event sync. Built for sub-100ms response times.

Real-time layer

WebSocket connections power live dashboard updates — gifts arriving, guests entering, RSVP confirmations — all without page refresh.

Gate app

Progressive Web App installable on any tablet. Caches full guest list for offline use. Camera access for QR scanning. Syncs automatically when online.

Dashboard

Web-based dashboards for organizer, families, couple, and gate staff. Role-based access control. Mobile-responsive.

Data & export

All data stored per-event with full audit trail. PDF and spreadsheet export. Data retention configurable.

13. Business Model

WeddingPass charges organizers per event, with optional add-ons. No commission on gifts — the couple receives the full amount.

Essential	Classic	Premium
KD 15 per event Up to 100 guests WhatsApp invitations RSVP tracking QR gate entry Basic dashboard	KD 35 per event Up to 250 guests All Essential features Digital gift system Two-family dashboards Live gift feed Post-event report	KD 75 per event Unlimited guests All Classic features Social chain invites Live venue gift wall Custom invitation branding Priority support Multiple gate staff accounts

Additional revenue streams

Gift wall display rental — KD 25 per event — venue screen setup and management

Branded invitation design — KD 20 per event — custom colors, fonts, couple photo

WhatsApp message credits — Included up to 500 messages; KD 0.05 per additional message

Data export — Free PDF summary; KD 5 for full spreadsheet with all data

Post-event photo integration — KD 15 — link photographer's album to thank-you messages

14. Roadmap

Phase 1 — MVP (Months 1–3)

- WhatsApp invitation sending
- RSVP confirmation via bot
- Basic guest list dashboard
- QR code gate entry app
- Couple dashboard (guests only)

Phase 2 — Gift system (Months 4–6)

- Digital gift flow via WhatsApp
- KNET and card payment integration
- Gift feed on couple dashboard
- Post-event PDF export
- Two-family separate dashboards

Phase 3 — Premium (Months 7–9)

- Live gift wall for venue display
- Social chain invitation system
- Branded invitation pages
- Auto post-event thank-you messages
- Multi-gate staff accounts

Phase 4 — Scale (Months 10–12)

- Saudi Arabia launch (Mada / STC Pay)
- UAE launch (Apple Pay)
- Corporate events & non-wedding use cases
- API for venue integrations
- Analytics dashboard for organizers

WeddingPass — turning the most important day into the most organized one.
